

PLANETARY REGENERATION

STATE-OF-THE ART SOLUTIONS TO THE CLIMATE CRISIS
BY MICHAEL PILARSKI

PRESENTATION & DISCUSSION
SEPT 14, THUR 6:30 - 8:30 PM

Whitefish, Montana

Venue TBA

Michael Pilarski will give a presentation on the best methods to re-green the planet, rehydrate drylands and stabilize the climate. Michael is collaborating with many of the leading experts in the field and will report on the best analyses and solutions currently available. Solutions include: rehydrating landscapes, rehydrating the atmosphere, converting tillage agriculture to agroforestry and perennial cover, and rehabilitating the soil sponge. Many experts agree that we could turn things around in as little as 25 years, if a broad mass movement evolved. Here is a chance to hear about the current status of planetary regeneration, what needs to be done and how you can be involved.

Michael Pilarski has been researching and writing on the global climate since the early 1970s. He founded **Friends of the Trees Society** in 1978 and the **Global Earth Repair Foundation** in 2019. He is a member of the **Ecosystem Restoration Camps** movement, **EcoRestoration Alliance**, and the **Global Evergreening Alliance**. Michael combines perspectives from agriculture, permaculture, agroforestry, ecosystem restoration, hydrology, ethno-ecology and other plant disciplines.
